## Energy Surcharge

Dear Valued Customer,

The dramatic situation in Ukraine is pushing the manufacturing costs affecting the whole industry across the World.

As direct consequence, gas and energy are negatively impacted.

Our main priority is to guarantee the supply at any costs whenever necessary.

We have tried till now to bare the energy cost increases, but the recent events force us to review our policy.

We will revise our selling prices effective for shipment from April 1, 2022. The additional increase is applied to the whole portfolio, and it will be between 0,20 Euro/kg and 0,30 Euro/kg according to the different product range due a different impact of the energy intensive.

This increase is currently and momentarily applied till the end of Q2. Clear understanding that we may be forced to extend if energy prices continue at this elevated level.

We remain at your disposal for any further request.

Yours Faithfully

Cristian Furiosi

CEO
